

### Certification Coverage Period:

#### Guidance for the White River Alliance Trained Individual Certification Program

Certification through the White River Alliance (WRA) is earned by completing both of the following requirements:

1. Completion of the full WRA training program (online or in person)
2. Attendance at the annual WRA online continuing education program

The full training program must be completed once during each IDEM Construction Stormwater General Permit (CSGP) cycle.

If you completed the full training at any time between 2022 and 2026, your certification remains valid through May 17, 2027, provided you attend the required annual continuing education program. This applies to both online and in-person full training formats.

The White River Alliance will release an updated full training program at the start of the next permit cycle in 2027. Individuals seeking certification under WRA's MS4 Regional Stormwater Program and its member communities will be required to complete the updated full training and continue participating in annual continuing education in subsequent years. Maintaining certification through the EPA's program will no longer be required.
